

BRADFORD WHITE EVERHOT® TANKLESS WATER HEATERS

The NEW Everhot® tankless water heaters are a state-of-the art, self modulating combustion system that offers energy efficient water heating in a compact but powerful design. This results in water being heating as needed (up to 9.4 GPM) for maximum hot water deliverability.

ENERGY STAR® Qualified - All models qualify for the January 1st, 2009 minimum ENERGY STAR® EF requirement, as well as most utility rebates.

Interior and Exterior Models - Twelve units (Natural Gas and Propane Gas) with self regulating maximum BTU/hr. inputs ranging from 150,000-199,000.

Maximum Hot Water Deliverability - Ideal for properly sized installations that desire a continuous flow of hot water (up to 9.4 GPM).

Application Flexibility - All models can be converted from a Residential Model to a Commercial Model with the use of a Commercial Controller (p/n 239-47805-00). This greatly reduces inventory for wholesalers as well as production lead times.

Space Heating Capability - All models incorporating a Commercial Controller are able to provide domestic hot water heating as well as space heating.

Diagnostic Codes - Control has the ability to monitor and display seventeen diagnostic codes to assist in trouble-shooting.

Space Saving - The small footprint and wall mounting capability of the Everhot® allows for installations in a closet, utility room or any convenient location.
