Do not store or use gasoline or other flammable vapors and liquids in the vicinity of the water heater or any other appliance.

- What to do if you smell gas:
  - Do not try to light any appliance.
  - Do not touch any electrical switch; do not use any phone in your building.
  - Immediately call your gas supplier from a neighbor phone. Follow the gas supplier instructions.
  - If you cannot reach your gas supplier, call the fire department.

- For your family comfort, safety and convenience, it is recommended this Setback Control be installed and serviced by a plumbing professional.

This manual must be used in conjunction with the Installation and Operation Manual for the water heater.
CONGRATULATIONS!

You have just purchased one of the finest water heater accessories on the market today!

This Installation and Operation Manual will explain in detail how to install and operate your new Setback Control. We strongly recommend you contact a plumbing professional for the installation of this new control.

We require that you carefully read this manual and the manual supplied with the water heater when questions arise. If you have any specific questions concerning your warranty, please consult the plumbing professional from whom your Setback Control was purchased. For your records, we recommend that you write the installation date for this control in the back of this manual.

This manual should be kept with the Setback Control.

Water Heater Setback Control:

This Setback Control works with the water heater gas control. It has the capability to adjust the setpoint of the water heater during periods where little or no hot water is required for use. The Setback Control adjusts the setpoint of a water heater similarly to the way a programmable thermostat does for a furnace.

Setback Control Features:

- 7 day / 4 period programming
- Conserves energy
- Hot water capacity indicator (provides an estimate of available hot water)
- Battery back-up stores programming during a power outage
- Can be programmed to comply with Sabbath requirements
- Similar interface to furnace / air conditioning thermostats
- Precision control of water temperature
Important Information

READ CAREFULLY

The following terms are used throughout this manual to bring attention to the presence of hazards at various risk levels, or to important information concerning product life.

- **DANGER**
  Indicates an imminently hazardous situation, which, if not avoided, will result in death, serious injury or substantial property damage.

- **CAUTION**
  Indicates a potentially hazardous situation, which, if not avoided, may result in moderate or minor injury or property damage.

- **WARNING**
  Indicates a potentially hazardous situation, which, if not avoided, could result in death, serious injury or substantial property damage.

- **NOTICE**
  Indicates special instructions on installation, operation or maintenance, which are important but not related to personal injury hazards.

---

**NOTICE**

This water heater is equipped with an energy cut out device to prevent overheating. Should overheating occur or the gas supply fails to shut off, turn off the manual gas control valve to the water heater and call a qualified service technician.

Whenever the water heater is filled with cold water, condensate will form on the cool tank surface and drops of water will fall on the hot burner and combustion chamber surfaces producing a “sizzling” noise. Condensation is normal and does not indicate a leak. It will disappear when the tank becomes heated.

---

**DANGER**

Hotter water increases the risk of scald injury. Scalding may occur within five (5) seconds at a temperature setting of 140°F (60°C). To protect against hot water injury, install an ASSE approved mixing valve in the water system. This valve will reduce point of discharge temperature by mixing cold and hot water in branch water lines. A licensed plumbing professional or local plumbing authority should be consulted.

---

**NOTICE**

The lower the temperature setting, the greater the energy efficiency, both to heat the water and to maintain the storage temperature during standby periods. Lower water temperatures also extend tank life. Remember, no water heating system will provide exact temperatures at all times. Allow a few days of operation at this setting to determine the correct temperature setting consistent with the requirements for the installation.
Important Information

**DANGER**

Water temperature over 125°F can cause severe burns instantly or death from scalds.

Children, disabled and elderly are at highest risk of being scalded.

Review this instruction manual before setting temperature at water heater.

Feel water before bathing or showering.

Temperature limiting valves are available.

---

**CAUTION**

This water heater, when set at a lower temperature setting, is not capable of producing hot water of sufficient temperature for sanitizing purposes.

---

**WARNING**

Do not operate the water heater or Setback Control without the Setback Control Junction Box Assembly cover in place.

Do not operate water heater and Setback Control with jumpered or absent controls or safety devices.

Turn off or disconnect the electrical power supply to the water heater and Setback Control before servicing. Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing.

All electrical wiring must be installed and grounded in accordance with local codes, or in the absence of local codes, the National Electrical Code, ANSI/NFPA 70 and/or CSA C22. Electrical Code.

---

For energy efficient operation of your water heater, the suggested initial water temperature setting is 120°F (49°C). During the winter season, or any cold period, you may desire a higher water temperature setting to adjust for the colder incoming water. This adjustment, however, may cause additional condensation to form on the cooler tank surface. This does not mean the tank is leaking. During summer months, the warmer incoming water temperatures will benefit the performance of your water heater and reduce the amount of condensation developed.

Condensation does not mean your tank is leaking. Over 40% of reported tank leaks on installation are proven to be condensation. To avoid unnecessary expense and inconvenience, make sure the tank is leaking before calling a service technician.

As was stated previously, the recommended water temperature during periods when hot water is required is 120°F (49°C). During setback periods, the recommended water temperature is 85°F (29°C). If it is possible that hot water will be needed during the Leave and/or Sleep periods, set the Setback to 105°F (41°C). This control may be used for the Sabbath. Please consult your local rabbi for recommended water temperatures and appropriate times for the Sabbath.

Initially, the Setback Control will default all water temperatures to the setpoint on the water heater gas control.

This section covers the installation of the Setback Control to the Setback Control Junction Box Assembly, which is mounted to the water heater. The Setback Control Junction Box Assembly was already factory installed or installed as part of the Performance Package.

**Unplug the Water Heater and Setback Control**
Step 1: Unplug the water heater and Setback Control. This is shown in Figure 1.

![Figure 1](image)

**Inspection of Setback Control**
Step 2: Remove the Setback Control from its packaging, and inspect it for any damage that occurred during shipping. This is shown in Figure 2.

![Figure 2](image)
Removal of Setback Control Protective Plate
Step 3: Remove the Setback Control Protective Plate from the Setback Control by pulling these components in opposite directions, as shown in Figure 3. Retain the protective plate if the Setback Control will be remote mounted.

Figure 3

Install Batteries
Step 4: Remove the battery holder from the Setback Control, and install (2) AAA batteries. Replace the battery holder after the batteries are installed. This is shown in Figure 4.

Figure 4
Installing the Setback Control

Installing Setback Control
Step 5: Using the Setback Control Junction Box Assembly (already installed on water heater), snap the Setback Control into the backplate connected to the Setback Control Junction Box Assembly, as shown in Figure 5.

Powering the Water Heater and Setback Control
Step 6: Plug in the water heater and the transformer to power the Setback Control. This is shown in Figure 6.
Remote Mounting the Setback Control

In the following section, the instructions detail how to Remote Mount the Setback Control.

**Unplug the Water Heater and Setback Control**
Step 1: Unplug the water heater and Setback Control. This is shown in Figure 7.

![Figure 7](image)

**Remove the Setback Control from the Backplate**
Step 2: Remove the Setback Control from the backplate attached to the Setback Control Junction Box Assembly. Some force may be required. This is shown in Figure 8.

![Figure 8](image)
Remote Mounting the Setback Control

**Prepare the Backplate for Wiring**
Step 3: Loosen the (3) slotted screws on the backplate attached to the Setback Control Junction Box Assembly. This is shown in Figure 9.

**Mount the Protective Plate**
Step 4: Mount the Setback Control Protective Plate in a desired location. Be sure that the Setback Control will not be direct sunlight, as the display may be difficult to read. This is shown in Figure 10.
Remote Mounting the Setback Control

**Measure Wire for Remote Mounting**
Step 5: Measure and cut (3) pieces of 18 AWG wire to a sufficient length to reach from the backplate on the Setback Control Junction Box Assembly to the Setback Control Protective Plate. This is shown in Figure 11.

![Figure 11](image)

**Label the Wires for Remote Mounting**
Step 6: Label the (3) cut wires (A), (B), and (C) respectively. Label both ends of the wires. This is shown in Figure 12. Masking tape can be used to label the wires.

![Figure 12](image)
Remote Mounting the Setback Control

Prepare the Wires for Installation
Step 7: Strip approximately ¼" of the wire’s insulation from each end of the three wires. This is shown in Figure 13.

Install Wire (A) – Backplate
Step 8: Using wire (A), insert one end into the top terminal location on the backplate (located on the Setback Control Junction Box Assembly). This is shown in Figure 14. Be sure that the wire already located in this location is not dislodged.
Fasten Wire (A) into its Designated Location – Backplate
Step 9: Tighten the slotted screw in the top terminal location on the backplate (located on the Setback Control Junction Box Assembly). This is shown in Figure 15.

Install Wire (B) – Backplate
Step 10: Using wire (B), insert one end into the middle terminal location on the backplate (located on the Setback Control Junction Box Assembly). This is shown in Figure 16. Be sure that the wire already located in this location is not dislodged.
Fasten Wire (B) into its Designated Location – Backplate
Step 11: Tighten the slotted screw in the middle terminal location on the backplate (located on the Setback Control Junction Box Assembly). This is shown in Figure 17.

Figure 17

Install Wire (C) – Backplate
Step 12: Using wire (C), insert one end into the bottom terminal location on the backplate (located on the Setback Control Junction Box Assembly). This is shown in Figure 18. Be sure that the wire already located in this location is not dislodged.

Figure 18
Fasten Wire (C) into its Designated Location – Backplate
Step 13: Tighten the slotted screw in the bottom terminal location on the backplate (located on the Setback Control Junction Box Assembly). This is shown in Figure 19.

Route Wires to Protective Plate
Step 14: Route all three wires to the Setback Control Protective Plate.
Remote Mounting the Setback Control

Install Wire (A) – Protective Plate
Step 15: Using wire (A), insert one end into the top terminal location on the Protective Plate. This is shown in Figure 20.

Fasten Wire (A) into its Designated Location – Protective Plate
Step 16: Tighten the slotted screw in the top terminal location on the Protective Plate. This is shown in Figure 21.
Install Wire (B) – Protective Plate
Step 17: Using wire (B), insert one end into the middle terminal location on the Protective Plate. This is shown in Figure 22.

Fasten Wire (B) into its Designated Location – Protective Plate
Step 18: Tighten the slotted screw in the middle terminal location on the Protective Plate. This is shown in Figure 23.
Remote Mounting the Setback Control

Install Wire (C) – Protective Plate
Step 19: Using wire (C), insert one end into the bottom terminal location on the Protective Plate. This is shown in Figure 24.

Fasten Wire (C) into its Designated Location – Protective Plate
Step 20: Tighten the slotted screw in the bottom terminal location on the Protective Plate. This is shown in Figure 25.
Remote Mounting the Setback Control

Install Setback Control
Step 21: Snap the Setback Control into the Protective Plate. Align the Setback Control to the Protective Plate, and press until it is fully seated. This is shown in Figure 26.

![Setback Control](image)

Figure 26

Install Cover Plate
Step 22: Snap the Setback Cover Plate onto the backplate (located on the Setback Control Junction Box Assembly). This is shown in Figure 27.

![Setback Control Junction Box Assembly](image)

Figure 27
Remote Mounting the Setback Control

Powering the Water Heater and Setback Control
Step 23: Plug in the water heater and the transformer to power the Setback Control. This is shown in Figure 28.

Figure 28
This section covers the replacement of the batteries used as a back-up power source for the Setback Control.

Unplug the Water Heater and Setback Control
Step 1: Unplug the water heater and Setback Control. This is shown in Figure 29.

Removal of Setback Control Junction Box Assembly Cover
Step 2: Remove Setback Control Junction Box Assembly cover by unscrewing the two Philips head screws holding it to the Setback Control Junction Box Assembly base. Retain these screws for later use. Remove the cover. This process is shown in Figure 30.
Changing the Batteries

Removal of Battery Holder
Step 3: Remove the battery holder by depressing its top edge and pulling the holder to the right, as shown in Figure 31.

Replacement of Batteries
Step 4: Replace the two batteries with (2) AAA batteries. The batteries should be oriented, as shown in Figure 32.

Re-installation of Battery Holder
Step 5: Replace the battery holder with the new batteries by depressing the top side of the battery holder and pushing on the right side of the holder. This is shown in Figure 33.
Re-installation of Setback Control Junction Box Assembly Cover
Step 6: Place the cover back on the Setback Control Junction Box Assembly and reinstall the Philips head screws previously removed, as shown in Figure 34.

Powering the Water Heater and Setback Control
Step 7: Plug in the water heater and transformer to power the Setback Control. This is shown in Figure 35.
Overview of Control Display and Buttons

The image, below, shows the Setback Control with all of its options shown on the screen. When the Setback Control is in use, only some of these items will be shown.

The image below is an example of what the Setback Control displays while operating in the HOME screen.

Figure 36

Figure 37
Display Key:

Wake: the time when the water heater setpoint should be raised to an appropriate temperature for its use.

Leave: the time when the water heater setpoint should be lowered when little to no hot water is needed.

Return: the time when the water heater setpoint should be raised for your return and eventual need for hot water.

Sleep: the time when the water heater setpoint should be lowered when no hot water is needed for the day.

Stdby (Standby): the water heater is not calling for heat (the water heater burner is not on).

On: the water heater is calling for heat (the water heater burner is on).

Low Bat (Low Battery): the Setback Control batteries are low and should be changed.

Service Needed: a fault has occurred and a serviceable issue needs to be addressed on the water heater or control. Contact a qualified service technician.

Display Features:

When the Setback Control is operating normally and is operating in its set schedule (no temporary or permanent hold set), the water temperature setpoint and time will be alternately shown. The current period water temperature setpoint will be shown for approximately five seconds, followed by the current time for approximately five seconds.

If the Setback Control has been set to a different water temperature, as part of a temporary or permanent hold, the hold water temperature will only be shown.

One of the features on the Setback Control is the display of the approximate hot water volume contained in the water heater. A sophisticated algorithm in the Setback Control determines the hot water volume based on the water heater gas control setpoint. The capacity shown is not based on the setpoints that are a part of the Setback Control schedule. The capacity is based off from the setpoint on the gas control. A maximum of six bars can be shown.

If six bars are shown, this means the maximum hot water is available for use given the current control setpoint. Alternatively, if only two bars are shown, this means that only one-third of the maximum hot water is available for use given the current control setpoint. The Setback Control assumes hot water over 90°F (32°C) is of sufficient temperature to be used.

The Setback Control water temperatures can be set to a maximum temperature the same as that set on the gas control.

-26-
The Start-up Procedure

This section covers what steps need to be performed when the Setback Control is installed on a water heater.

**Screen When Power is Applied**
Step 1: Initially, all the segments on the screen are shown when the Setback Control is powered up. This is shown in Figure 38.

![Figure 38](image)

**Revision Level Screen**
Step 2: After a few seconds, the software revision level of the Setback Control is shown. An example is shown in Figure 39.

![Figure 39](image)

**Select the Correct Hour**
Step 3: The hour digit or digits will begin to flash initially. Using the **UP** (increase hour) or **DOWN** (decrease hour) buttons, change the hour until the correct hour is shown. This is shown in Figure 40.

![Figure 40](image)
The Start-up Procedure

Locking in the Correct Hour
Step 4: When the correct hour is shown, press the RIGHT (Next) button. This is shown in Figure 41.

Select the Correct Minute
Step 5: Using the UP (increase minute) or DOWN (decrease minute) buttons, adjust the minute until the correct minute is shown. This process is shown in Figure 42.

Lock in the Correct Minute
Step 6: When the correct minute is shown, press the RIGHT (Next) button. This is shown in Figure 43.
The Start-up Procedure

Select AM / PM
Step 7: Next, the AM / PM symbol will begin to flash. Using the UP (index AM / PM) or DOWN (index AM / PM) buttons, select AM / PM. See Figure 44.

Lock in AM / PM
Step 8: Press the RIGHT (Next) button to proceed. This is shown in Figure 45.

Select the Day
Step 9: Finally, select the day. A day will be flashing initially. Using the UP (increase one day) or DOWN (decrease one day) buttons, change the day until the correct day is shown. See Figure 46.
The Start-up Procedure

Finishing the Start-up Procedure
Step 10: Press the LEFT (Done) button, as shown in Figure 47. This completes the Setback Control Start-up Procedure. You will now be taken to the HOME screen.

Figure 47
Once the Setback Control Start-up procedure has been performed, the Setback schedule must be entered. This section gives step-by-step instructions on how to enter the Setback schedule.

Setting the Schedule

Step 1: From the Home screen, press the **RIGHT** (Schedule) button, as shown in Figure 48.

![Figure 48](image)

Select the Day

Step 2: Monday is flashing initially. Press the **RIGHT** (Next) button to proceed to the Wake Period for Monday. This is shown in Figure 49. When the remaining days of the week are to be programmed, the **UP** (increase day) or **DOWN** (decrease day) buttons must be used to change the day.

![Figure 49](image)

Select the Wake Period Start Time

Step 3: Press the **UP** (increase time) or **DOWN** (decrease time) buttons until the wanted time is shown. This is shown in Figure 50.

![Figure 50](image)
Lock in Wake Period Start Time
Step 4: Press the RIGHT (Next) button to lock in the Wake Period start time, as shown in Figure 51.

Select AM / PM
Step 5: Using the UP (index AM / PM) or DOWN (index AM / PM) buttons, select AM / PM, as shown in Figure 52.

Lock in AM / PM
Step 6: Press the RIGHT (Next) button to lock in AM / PM. This is shown in Figure 53.
Select the Wake Period Water Temperature
Step 7: Using the UP (increase water temperature) or DOWN (decrease water temperature) buttons, select the desired water temperature. This is shown in Figure 54.

![Figure 54](image)

Lock in Wake Period Water Temperature
Step 8: Press the RIGHT (Next) button to lock in the Wake period water temperature, as shown in Figure 55.

![Figure 55](image)

Select the Leave Period Start Time
Step 9: Press the UP (increase time by 15 minutes) or DOWN (decrease time by 15 minutes) buttons to select the Leave period start time. The time increments in 15-minute intervals just as it did for the Wake period. This is shown in Figure 56.

![Figure 56](image)
Lock in Leave Period Start Time

Step 10: Press the RIGHT (Next) button to set the Leave start time, which is shown in Figure 57.

![Figure 57](image)

Select AM / PM

Step 11: Next, using the UP (index AM / PM) or DOWN (index AM / PM) buttons, select AM / PM, as shown in Figure 58.

![Figure 58](image)

Lock in AM / PM

Step 12: Press the RIGHT (Next) button to lock in AM / PM. This is shown in Figure 59.

![Figure 59](image)
Select the Leave Period Water Temperature
Step 13: Using the UP (increase water temperature) or DOWN (decrease water temperature) buttons, select the desired water temperature for the Leave period. This is shown in Figure 60.

Lock in Leave Period Water Temperature
Step 14: Press the RIGHT (Next) button to lock in the Leave period water temperature, as shown in Figure 61.

Select the Return Period Start Time
Step 15: Press the UP (increase time by 15 minutes) or DOWN (decrease time by 15 minutes) buttons to select the Return period start time. The time increments in 15-minute intervals just as it did for the other periods. This is shown in Figure 62.
Setting the Setback
Control Schedule – Initial Set-up

Lock in Return Period Start Time
Step 16: Press the RIGHT (Next) button to set the Return period start time, which is shown in Figure 63.

![Figure 63](image)

Select AM / PM
Step 17: Next, using the UP (index AM / PM) or DOWN (index AM / PM) buttons, select AM / PM, as shown in Figure 64.

![Figure 64](image)

Lock in AM / PM
Step 18: Press the RIGHT (Next) button to lock in AM / PM. This is shown in Figure 65.

![Figure 65](image)
Select the Return Period Water Temperature
Step 19: Using the **UP** (increase water temperature) or **DOWN** (decrease water temperature) buttons, select the Return period water temperature. This is shown in Figure 66.

Lock the Return Period Water Temperature
Step 20: Press the **RIGHT** (Next) button to lock in the Return period water temperature, as shown in Figure 67.

Select the Sleep Period Start Time
Step 21: Press the **UP** (increase time by 15 minutes) or **DOWN** (decrease time by 15 minutes) buttons to select the Sleep period start time. The time increments in 15-minute intervals just as it did for the previous periods. This is shown in Figure 68.
Lock the Sleep Period Start Time
Step 22: Press the RIGHT (Next) button to set the Sleep period start time, which is shown in Figure 69.

Select AM / PM
Step 23: Next, using the UP (index AM / PM) or DOWN (index AM / PM) buttons, select AM / PM, as shown in Figure 70.

Lock in AM / PM
Step 24: Press the RIGHT (Next) button to lock in AM / PM. This is shown in Figure 71.
Select Sleep Period Water Temperature
Step 25: Using the UP (increase water temperature) or DOWN (decrease water temperature) buttons, select the desired Sleep period water temperature. This is shown in Figure 72.

Lock in Sleep Period Water Temperature
Step 26: Press the RIGHT (Next) button, as shown in Figure 73. Now, the Sleep time period is set for Monday. This completes the one day of the Setback schedule. To set the schedule for the remaining days of the week, repeat the procedures beginning at Step 2 on page 31 for Tuesday through Sunday schedules. Otherwise, proceed to Step 27.

To set the schedule for the remaining days of the week, repeat the procedures beginning at Step 2 on page 31 for Tuesday through Sunday schedules. Otherwise, proceed to Step 27.

Finishing the Setback Schedule
Step 27: Press the LEFT (Done) button to finish the Setback schedule, as shown in Figure 74.
If the Setback schedule needs to be modified at any point, the instructions in this section can be followed to edit the previously entered water temperatures and times.

**Enter Editing the Schedule Mode**
Step 1: From the Home screen, press the **RIGHT** (Schedule) button, as shown in Figure 75.

**Select the Day to Edit**
Step 2: Monday is flashing initially. Using the **UP** (increase day) or **DOWN** (decrease day) buttons, scroll until the day that needs to be edited is shown. This is shown in Figure 76.

**Lock in the Day to Edit**
Step 3: Press the **RIGHT** (Next) button to edit a particular day water temperatures and times. This is shown in Figure 77.
**Edit the Wake Period Start Time**

Step 4: Press the **UP** (increase time by 15 minutes) or **DOWN** (decrease time by 15 minutes) buttons until the wanted time is shown. This is shown in Figure 78.

![Figure 78](image)

**Lock in the Wake Period Start Time**

Step 5: Press the **RIGHT** (Next) button to lock the Wake period start time for the day selected, as shown in Figure 79.

![Figure 79](image)

**Edit AM / PM**

Step 6: Next, using the **UP** (index AM / PM) or **DOWN** (index AM / PM) buttons, select AM / PM, as shown in Figure 80.

![Figure 80](image)
Editing the Setback Schedule

Lock in AM / PM
Step 7: Press the RIGHT (Next) button to select AM / PM. This is shown in Figure 81.

![Figure 81](image)

Edit the Wake Period Water Temperature
Step 8: Using the UP (increase water temperature) or DOWN (decrease water temperature) buttons, select the Wake period desired water temperature. This is shown in Figure 82.

![Figure 82](image)

Lock in the Wake Period Water Temperature
Step 9: Press the RIGHT (Next) button to lock in the Wake period water temperature, as shown in Figure 83. Now, the Wake time period is set for the day being edited.

![Figure 83](image)
**Edit the Leave Period Start Time**

Step 10: Press the **UP** (increase time by 15 minutes) or **DOWN** (decrease time by 15 minutes) buttons to edit the Leave period start time. The time increments in 15-minute intervals just as it did for the Wake period. This is shown in Figure 84.

![Figure 84](image_url)

**Lock in the Leave Period Start Time**

Step 11: Press the **RIGHT** (Next) button to lock in the Leave period start time, which is shown in Figure 85.

![Figure 85](image_url)

**Edit AM / PM**

Step 12: Next, using the **UP** (index AM / PM) or **DOWN** (index AM / PM) buttons, select AM / PM, as shown in Figure 86.

![Figure 86](image_url)
Editing the Setback Schedule

Lock in AM / PM
Step 13: Press the **RIGHT** (Next) button to lock in AM / PM. This is shown in Figure 87.

![Figure 87](image)

Edit the Leave Period Water Temperature
Step 14: Using the **UP** (increase water temperature) or **DOWN** (decrease water temperature) buttons, set the Leave period desired water temperature. This is shown in Figure 88.

![Figure 88](image)

Lock in the Leave Period Water Temperature
Step 15: Press the **RIGHT** (Next) button to lock in the Leave period water temperature, as shown in Figure 89. Now, the Leave time period is set for the day being edited.

![Figure 89](image)
Edit the Return Period Start Time
Step 16: Press the **UP** (increase time by 15 minutes) or **DOWN** (decrease time by 15 minutes) buttons to edit the time that this period becomes active. The time increments in 15-minute intervals just as it did for the Wake period. This is shown in Figure 90.

![Figure 90](image_url)

Lock in the Return Period Start Time
Step 17: Press the **RIGHT** (Next) button to lock in the Return period start time, which is shown in Figure 91.

![Figure 91](image_url)

Edit AM / PM
Step 18: Next, using the **UP** (index AM / PM) or **DOWN** (index AM / PM) buttons, select AM / PM, as shown in Figure 92.

![Figure 92](image_url)
Editing the Setback Schedule

Lock in AM / PM
Step 19: Press the RIGHT (Next) button to lock in AM / PM. This is shown in Figure 93.

![Figure 93](image)

Edit the Return Period Water Temperature
Step 20: Using the UP (increase water temperature) or DOWN (decrease water temperature) buttons, select the Return period desired water temperature. This is shown in Figure 94.

![Figure 94](image)

Lock in Return Period Water Temperature
Step 21: Press the RIGHT (Next) button to lock in the Return period water temperature, as shown in Figure 95. Now, the Return time period is set for day being edited.

![Figure 95](image)
Edit the Sleep Period Start Time
Step 22: Press the **UP** (increase time by 15 minutes) or **DOWN** (decrease time by 15 minutes) buttons to edit the Sleep period start time. The time increments in 15-minute intervals just as it did for the previous periods. This is shown in Figure 96.

```
Figure 96
```

Lock in the Sleep Period Start Time
Step 23: Press the **RIGHT** (Next) button to lock in the Sleep period time, which is shown in Figure 97.

```
Figure 97
```

Edit AM / PM
Step 24: Next, using the **UP** (index AM / PM) or **DOWN** (index AM / PM) buttons, select AM / PM, as shown in Figure 98.

```
Figure 98
```
Editing the Setback Schedule

**Lock in AM / PM**
Step 25: Press the **RIGHT** (Next) button to lock in AM / PM. This is shown in Figure 99.

![Figure 99](image)

**Edit the Sleep Period Water Temperature**
Step 26: Using the **UP** (increase water temperature) or **DOWN** (decrease water temperature) buttons, select the Sleep period desired water temperature. This is shown in Figure 100.

![Figure 100](image)

**Lock in the Sleep Period Water Temperature**
Step 27: Press the **RIGHT** (Next) button, as shown in Figure 101. Now, the Sleep time period is set for the day being edited. This completes the editing of one day of the Setback schedule. To change the schedule for the remaining days of the week, repeat the procedures beginning at Step 2 on page 40, for Tuesday through Sunday schedules. Otherwise, proceed to Step 28.

![Figure 101](image)
Exiting the Edit Schedule Mode
Step 28: When you are finished editing the Setback schedule, press the LEFT (Done) button to exit the Schedule editing mode, as shown in Figure 102. You will now return to the HOME screen.

Figure 102
Setting a Temporary Temperature Hold

If an alternate water temperature is required for a short period of time, follow the instructions in this section to temporarily modify the Setback set water temperature.

Setting a New Water Temperature
Step 1: From the Home screen, press the **UP** (increase water temperature) or **DOWN** (decrease water temperature) buttons until the new desired water temperature is shown. This is shown in Figure 103.

Display of Temporary Hold Water Temperature
Step 2: A temporary hold will maintain the water heater setpoint at the new setting for two hours. Then, the Setback Control will revert back to its programmed schedule. When the Setback Control is in a temporary hold, the “Hold,” in the lower left corner of the display, will be flashing. This is shown in Figure 104.

Exiting a Temporary Hold
Step 3: To manually exit a Temporary Hold, press the **RIGHT** (Schedule) button, as shown in Figure 105.
If an alternate water temperature is required for an indefinite amount of time, follow the instructions in this section to modify the Setback water temperature for an open ended amount of time.

**Setting a New Water Temperature**

Step 1: From the Home screen, press the **UP** (increase water temperature) or **DOWN** (decrease water temperature) buttons until the new desired water temperature is shown. This is shown in Figure 106.

**Display of Permanent Hold Water Temperature**

Step 2: A permanent hold will maintain the water heater setpoint at the new setting indefinitely. Press the **LEFT** (Hold) button to establish a permanent hold. When the Setback Control is in a permanent hold, the “Hold,” in the lower left corner of the display, will be shown continuously (not flashing). This is shown in Figure 107.

**Exiting a Permanent Hold**

Step 3: To exit a Permanent Hold, press the **RIGHT** (Schedule) button, as shown in Figure 108.
Editing the Clock / Day

This section covers how to change the Setback Control clock, as well as the day. This may become useful when time changes for daylight savings.

Enter Clock / Day Editing Mode
Step 1: From the Home screen, press the LEFT (Set Clock / Day) button, as shown in Figure 109.

Select Correct Hour
Step 2: Using the UP (increase hour) or DOWN (decrease hour) buttons, select the correct hour. This is shown in Figure 110.

Lock in Correct Hour
Step 3: Press the RIGHT (Next) button to set the hour, which is shown in Figure 111.
Select Correct Minute
Step 4: Using the **UP** (increase minute) or **DOWN** (decrease minute) buttons, adjust the minute until the correct one is shown. This process is shown in Figure 112.

![Figure 112](image)

Lock in Correct Minute
Step 5: Press the **RIGHT** (Next) button to set the minute, which is shown in Figure 113.

![Figure 113](image)

Select AM / PM
Step 6: Using the **UP** (index AM / PM) or **DOWN** (index AM / PM) buttons, select AM / PM, as shown in Figure 114.

![Figure 114](image)
Lock in AM / PM
Step 7: Press the RIGHT (Next) button to proceed, which is shown in Figure 115.

![Figure 115](image)

Select Correct Day
Step 8: Using the UP (increase day) or DOWN (decrease day) buttons, select the correct day. This process is shown in Figure 116.

![Figure 116](image)

Lock in Correct Day & Complete Editing Clock / Day Mode
Step 9: Press the LEFT (Done) button, which is shown in Figure 117. This completes the procedure for editing the Setback clock and day.

![Figure 117](image)
Sabbath Time Period Editing

In order to comply with the Sabbath, follow the instructions in this section to modify the Setback schedule. Please consult your local rabbi for recommended water temperatures and appropriate times for the Sabbath.

Enter Sabbath Time Period Editing
Step 1: From the Home screen, press the RIGHT (Schedule) button, as shown in Figure 118.

Select the Day to Edit
Step 2: Monday is the first day that is shown flashing initially. Using the UP (increase day) or DOWN (decrease day) buttons, scroll until Friday is shown. This is shown in Figure 119.

Start Editing Friday
Step 3: Press the RIGHT (Next) button to edit the schedule water temperatures and times. This is shown in Figure 120.
### Sabbath Time Period Editing

#### Edit the Wake Period Start Time
Step 4: Press the **UP** (increase time by 15 minutes) or **DOWN** (decrease time by 15 minutes) buttons until the wanted time is shown. This is shown in Figure 121.

![Figure 121](image)

#### Lock in Wake Period Start Time
Step 5: Press the **RIGHT** (Next) button to lock in the Wake period start time, as shown in Figure 122.

![Figure 122](image)

#### Edit AM / PM
Step 6: Next, using the **UP** (index AM / PM) or **DOWN** (index AM / PM) buttons, select AM / PM. This is shown in Figure 123.

![Figure 123](image)
Lock in AM / PM
Step 7: Press the RIGHT (Next) button to lock in AM / PM. This is shown in Figure 124.

![Figure 124](image1)

Edit the Wake Period Water Temperature
Step 8: Using the UP (increase water temperature) or DOWN (decrease water temperature) buttons, select the Wake period desired water temperature. This is shown in Figure 125.

![Figure 125](image2)

Lock in Wake Period Water Temperature
Step 9: Press the RIGHT (Next) button to lock in the Wake period water temperature, as shown in Figure 126. Now, the Wake time period is set for the day being edited.

![Figure 126](image3)
Sabbath Time Period Editing

Edit the Leave Period Start Time
Step 10: Press the UP (increase time by 15 minutes) or DOWN (decrease time by 15 minutes) buttons to edit the Leave period start time. The time increments in 15-minute intervals just as it did for the Wake period. This is shown in Figure 127.

Lock in Leave Period Start Time
Step 11: Press the RIGHT (Next) button to lock in the Leave period start time, which is shown in Figure 128.

Edit AM / PM
Step 12: Next, using the UP (index AM / PM) or DOWN (index AM / PM) buttons, edit AM / PM, as shown in Figure 129.
Lock in AM / PM
Step 13: Press the **RIGHT** (Next) button to lock in AM / PM. This is shown in Figure 130.

![Figure 130](image1)

Edit Leave Period Water Temperature
Step 14: Using the **UP** (increase water temperature) or **DOWN** (decrease water temperature) buttons, select the Leave period desired water temperature. This is shown in Figure 131.

![Figure 131](image2)

Lock in Leave Period Water Temperature
Step 15: Press the **RIGHT** (Next) button to lock in the Leave period water temperature, as shown in Figure 132. Now, the Leave time period is set for Friday.

![Figure 132](image3)
Sabbath Time Period Editing

Edit the Return Period Start Time
Step 16: Press the UP (increase time by 15 minutes) or DOWN (decrease time by 15 minutes) buttons to edit the time the Return period start time. The time increments in 15-minute intervals just as it did for the Wake period. This is shown in Figure 133.

![Figure 133](image)

Lock in Return Period Start Time
Step 17: Press the RIGHT (Next) button to lock in the Return period start time, which is shown in Figure 134.

![Figure 134](image)

Edit AM / PM
Step 18: Next, using the UP (index AM / PM) or DOWN (index AM / PM) buttons, select AM / PM, as shown in Figure 135.

![Figure 135](image)
Lock in AM / PM
Step 19: Press the **RIGHT** (Next) button to lock in AM / PM. This is shown in Figure 136.

![Figure 136](image)

Edit Return Period Water Temperature
Step 20: Using the **UP** (increase water temperature) or **DOWN** (decrease water temperature) buttons, select the Return period desired water temperature. This is shown in Figure 137.

![Figure 137](image)

Lock in Return Period Water Temperature
Step 21: Once the water temperature for the Return time period is selected, press the **RIGHT** (Next) button to lock in the Return period water temperature, as shown in Figure 138. Now, the Return time period is set for day being edited.

![Figure 138](image)
Sabbath Time Period Editing

Edit Sleep Period Start Time
Step 22: Press the UP (increase time by 15 minutes) or DOWN (decrease time by 15 minutes) buttons to edit the Sleep period start time. The time increments in 15-minute intervals just as it did for the previous periods. This is shown in Figure 139.

Lock in Sleep Period Start Time
Step 23: Press the RIGHT (Next) button to lock in the Sleep period start time, which is shown in Figure 140.

Edit AM / PM
Step 24: Next, using the UP (index AM / PM) or DOWN (index AM / PM) buttons, select AM / PM, as shown in Figure 141.
Sabbath Time Period Editing

Lock in AM / PM
Step 25: Press the **RIGHT** (Next) button to lock in AM / PM. This is shown in Figure 142.

![Figure 142](image)

Edit the Sleep Period Water Temperature
Step 26: Using the **UP** (increase water temperature) or **DOWN** (decrease water temperature) buttons, select the Sleep period desired water temperature. This is shown in Figure 143.

![Figure 143](image)

Lock the Sleep Period Water Temperature
Step 27: Press the **RIGHT** (Next) button to lock in the Sleep period water temperature, as shown in Figure 144. Now, the Sleep time period is set for Friday.

![Figure 144](image)
Continuing with Sabbath Time Period Editing
To edit the schedule for Saturday, return to Step 2 on page 55 and follow the same procedure. When you are finished changing the Setback schedule, press the **LEFT** (Done) button, as shown in Figure 145.
In this section, the table details what the diagnostic codes on the Setback Control mean. The diagnostic codes that can be displayed are different and depend on the gas valve / control that is connected to the Setback Control.

<table>
<thead>
<tr>
<th>Diagnostic Code #</th>
<th>Description</th>
<th>S9360B</th>
<th>S9380B</th>
<th>Accessory Module</th>
<th>WV8840 (standing pilot gas control)</th>
<th>WV4460E (intermittent pilot gas control)</th>
